# ATM

An ATM kiosk is a self-service terminal that combines an automated teller machine (ATM) with additional features and functionalities.

It is a standalone structure or enclosure designed to provide convenient and secure access to banking services. ATM kiosks typically offer a range of services, including cash withdrawals, deposits, balance inquiries, fund transfers, bill payments and more.

They are strategically located in public areas such as shopping centers, airports, train stations and financial institutions to provide easy and accessible banking services to customers 24/7.

ATM kiosks are equipped with user-friendly interfaces, such as touch screens or keypads, allowing users to interact with the machine and complete transactions independently, without the need for human assistance. These kiosks enhance

convenience, speed and efficiency in banking, enabling users to perform a variety of financial transactions quickly and securely.

# ATM WALK-UP

An ATM walk-up refers to a type of automated teller machine (ATM) that is specifically designed for use by pedestrians. It is typically located in an outdoor setting or within a building's entrance, easily accessible to individuals on foot. ATM walk-up machines are strategically placed in high-traffic areas such as shopping centers, airports or busy streets to provide convenient access to banking services. Users can approach the ATM on foot and perform various transactions, including cash withdrawals, deposits, balance inquiries and more. These ATMs are designed to be user-friendly and secure. ATM walk-ups enhance accessibility, convenience and flexibility in banking, providing a convenient option for pedestrians to manage their finances.

Generally constructed of aluminum and steel, these ATM are specifically created for branding, increasing recognition of the bank they adorn. They are effectively illuminated either from within or externally with the use of down lights.

# ATM DRIVE-UP

An ATM drive-up refers to an automated teller machine (ATM) specifically designed for use by customers in vehicles. It is typically located in a dedicated area of a bank or financial institution's premises, allowing customers to access banking services without leaving their vehicles. ATM drive-up machines are designed with features that accommodate the convenience of drive-through banking. Customers can access the ATM from their car, interact with the machine through a window or intercom system and perform various transactions such as cash withdrawals, deposits, balance inquiries and more. It provide quick and efficient service, allowing customers to conveniently manage their finances without the need to park and enter the bank.

**Drive-up ATMs, also known as drive-through ATMs, are one of the most convenient of banking features, allowing you to withdraw cash from your account without even getting out of the car.**

# ATM SURROUNDS

ATM surrounds refer to the protective enclosures or structures that are designed to enhance the security, functionality and aesthetics of automated teller machines (ATMs). These surrounds are specifically built to safeguard ATMs from vandalism, theft and other external elements, while also providing a visually appealing and user-friendly experience for ATM users.

An electronic machine used for financial transactions. As the term implies, it is an 'automated' banking platform that does not require any banking representative/teller or a human cashier.
